Jeffrey Schwab

jeff@unbuggy.com • +1 (617) 407-2542

Engineering leader with 25+ years building and scaling startup engineering teams across health AI, FinTech, and developer platforms.

EXPERIENCE

Staff Engineer at Bluefin, November 2024 – April 2026

DeFi perpetuals exchange. Rust, Python, TypeScript, Postgres, Redis, Kafka, Kubernetes on AWS.

- Led the team's adoption of Rust, helping bring the company's first production Rust services from late-stage development to launch
- Sustained sub-millisecond latency and three-nines uptime through architecture refinement and performance work
- Built and open-sourced exchange connectors (CCXT, FreqTrade) for institutional integration: github.com/fireflyprotocol/ccxt
- Raised code quality through thorough review and mentorship of engineers new to Rust

Software Architect at Wieldy AI, May 2023 – November 2024

Seed-stage healthtech startup helping dental practices navigate insurance workflows. Team of 5 engineers.

- Built backend services for real-time data aggregation and analysis (Python, async)
- Developed RPA-based integrations with insurance carrier systems
- Contributed to architecture decisions from early platform design through first-customer launches

Acting CTO at Epistemic AI, April 2021 – June 2022

NLP and knowledge-graph platform for biomedical research. Real paying users across academic researchers, pharmaceutical companies, and clinicians.

- Led an engineering team of ten across backend, frontend, and ML infrastructure
- Built infrastructure for versioning and deploying ML models independently of application code
- Coordinated cross-functional work with product, science, and leadership teams
- Stack: Python, knowledge graphs (SPARQL), ML model serving

Senior Software Engineer at Google, January 2019 – August 2020

- Engineering Productivity team within Core Systems
- Led development of automatic unit test generator for Angular components
- Collaborated regularly with engineers on three coasts

Engineer at Zipdrug, July 2018 – January 2019

- Began as contractor, served briefly as Head of Engineering
- Formalized development processes and automated data integrations
- Acquired by Anthem's PBM, IngenioRx

Principal Engineer at Metamarkets, December 2016 – November 2017

- First engineer in NYC office of Big Data analytics startup
- Identified opportunities, built prototypes, and guided ongoing development
- Acquired by Snap

Engineering Manager at Orchard Platform, December 2013 – August 2016

- Employee #1 at FinTech startup (acquired, now American Express)
- Hired as Senior Engineer, then managed Infrastructure team
- Designed and implemented cloud-based microservice architecture

Tech Lead at Bloomberg, November 2010 – March 2013

- Hired as C++ developer after two-month contract; later managed a small team
- Helped create binding layer to expose native code to dynamic languages
- Guided development of Launchpad, a special-purpose window manager

Earlier roles, 2000 – 2010

Engineering positions at Sun Microsystems, IBM, GE, and various startups. C++, embedded systems, and microprocessor design automation (EDA).

EDUCATION

B.S. in Computer Systems Engineering, Boston University

TECHNOLOGY

- **Languages**: Python, Rust, TypeScript, C++, Go
- **AI/ML**: NLP, knowledge graphs, model serving and versioning, LLM-based systems
- **Systems**: Distributed systems, real-time data, microservices
- **Leadership**: Engineering team management, hiring, cross-functional collaboration
